How to create a CrypCloud account

First, click on the CrypCloud icon ("Connect") in the CT2 ribbon bar:

After that, click in the CrypCloud login Screen on "Create new account":

Enter your new account credentials:

You need a valid email address. Your password will be used to encrypt your CT2 user certificate. For convenience reasons the certificate is stored ENCRYPTED at the CT2 certification authority server. You

can use your login data from ANY computer that has access to the CrypTool Cloud since the certificate will be automatically downloaded at a login-attempt. Therefore, we recommend to use a password manager, i.e. Keepass2 (http://keepass.info/download.html), and generate a strong random generated password with at least 16byte length to protect your account.

After entering your credentials click the "Next" Button.

You will receive a confirmation email which contains a verification code.

Dear testuser,
you have requested a new account for the CrypTool 2 network with the following data:

Username: testuser
Email: j3142069@trbvm.com
To activate your account, you will have to copy the verification code and paste it into the appropriate formular in your CrypTool 2 application.
Please be sure to activate your account within the next 7 days, otherwise your request will expire.

Your verification code is: 7e5a4094eb46b59

Yours CrypTool 2 team

Copy that code in the verification field:

Create a new account

Please enter the verification code.

Verification Code: 7e5a4094eb46b59   ✔ Verify

Press the "Verify" button.

You should finally see that your "Account was successfully requested".

Create a new account

Account successfully requested

Your new account was requested successfully.

✔ OK

From now on, you can use your account to log into the CrypCloud.
